Subject: RE: C6 CCS Monitoring Program

Adam, Rich Moen (Shell seismic specialist) and I would like to give you a call tomorrow at 1:00 (PST) to discuss the seismic monitoring alternatives proposed in the UIC permit app. Are you available to talk for about 30 minutes?

Subject: C6 CCS Monitoring Program

Damonica--

I had a question about some of the monitoring equipment proposed in C6's CCS project application. The continuous active-source seismic monitoring (CASSM) survey is described as being able to monitor the growth of the plume between the injection and monitoring wells. My question about the CASSM survey is whether it will be able to track CO₂ only within the injection zone, or whether it would be able to detect CO₂ outside the injection zone as well (in the unlikely event that there is leakage through the confining zone). Thank you very much for looking into this for me.
